

RITEWEIGHT

IN-LINE CONVEYOR SCALE SYSTEMS
- FOR ALL STANDARD CONVEYORS -

MAPPED DATA SORTED BY:
Temperature | Field | Type | Date

NEW! 500 SERIES

RUGGED DESIGN
IMPROVED INSTALLATION
IMPROVED DISPLAY

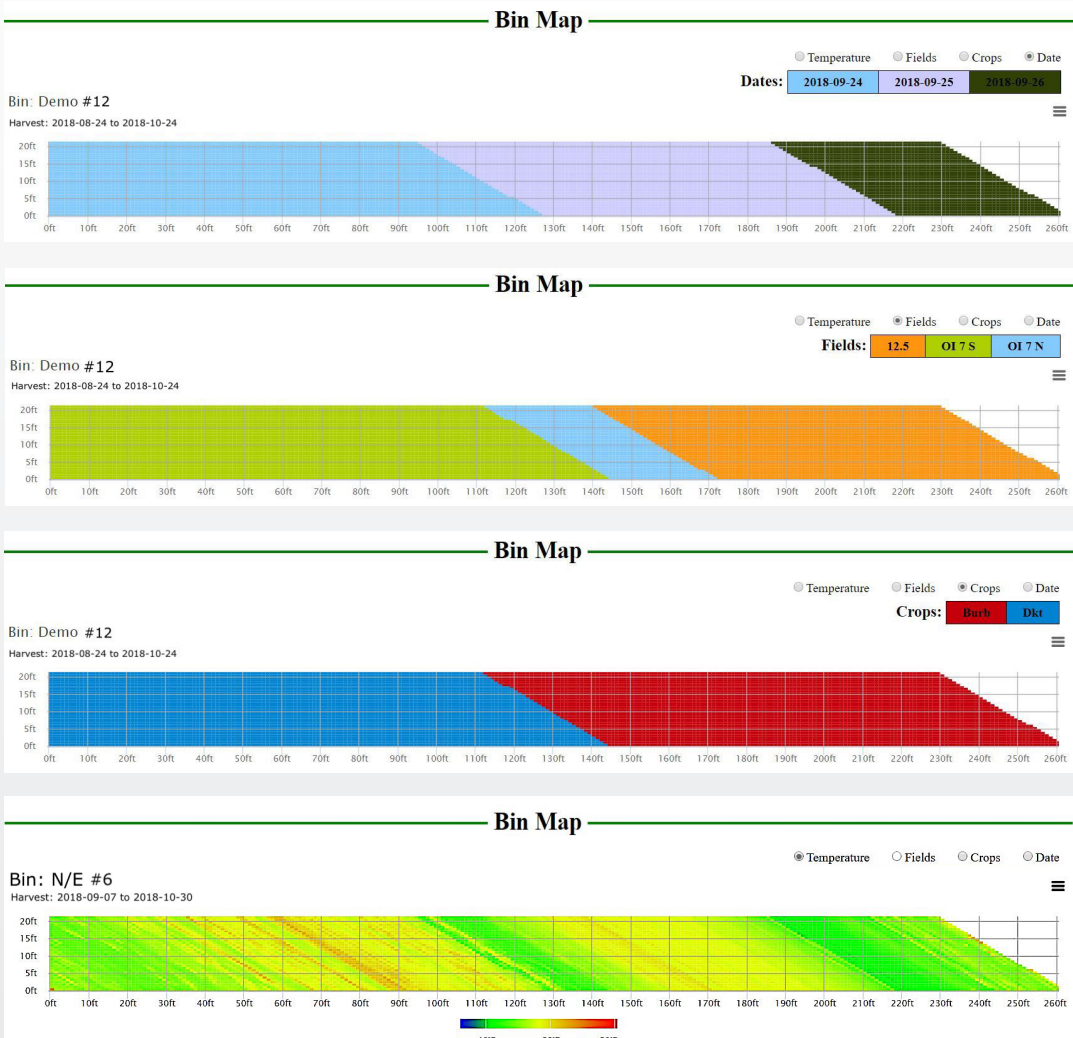

TRACK EVERYTHING, ACCESS ANYWHERE

GREENTRONICS

Data can be viewed by temperature, field, crop (variety), and date.

Greentronics offers an efficient automated method for creating detailed inventory records and geo-tracking with a program that provides output maps by temperature, field, type, and date.

"The scale is running great. Very accurate! It still amazes me how something so simple can work so well. We needed advice just once. Tech support was a call away and had the answer!"

- Blake Peterson, Walther Farms

Scale offers access to a cloud server where data is sent, processed, and stored. Account users can view, download and share data, summaries, and reports.

Bin: White W #12

RITEWEIGHT IN-LINE CONVEYOR SCALE SYSTEMS

RiteWeight In-Line Conveyor:

Washed and graded potatoes are being weighed into holding bins. When the bin reaches the desired weight, the next bin begins to fill. This allows more precise batching of product without left-overs or shortages when loading trucks. The in-line scale is also much easier to install and much more economical compared to installing load cells under the bin legs.

FEATURES

- **Cloud Server Access** to remotely access data, summaries, and reports.
- **Display and Save** data for individual loads, as well as running totals for bins, fields, and varieties.
- **Efficient.** Weigh the truck as it is being loaded.
- **Adaptable.** This system can be used on the conveyor you already own (belted chain or solid belts).
- **Optional** large bright wired or wireless remote display.
- **Optional Control Output.** For example, can activate an alarm or a shut-down when a pre-set load weight is reached.
- **Optional Current Loop Output.** 4-20mA (or 0-5V) proportional output from the scale may be used to control other equipment (e.g. seed treatment application pump).
- **Yield Monitor Option.** Easily upgraded for yield monitoring by installing on a harvester and connecting to a GPS receiver.

What Our Customers Are Saying

"We have been using the RiteWeight system successfully for a couple years. Before we had it, we always had to use an off-site truck scale to confirm weights and often needed to go back to storage to take weight off or add some weight. We really enjoy how much more efficient we can work using the RiteWeight. It is plenty accurate and we often skip the trip to the scale altogether."

- Melvin Birch, PEI

RITEWEIGHT IN-LINE CONVEYOR SCALE SYSTEMS

RiteWeight can also be used to measure and control an application pump for seed treatment. This assists with an efficient and accurate application.

Ordering Information:

Part # CS500-2, for Standard Scale or CS500-2T, for Scale with Automatic Tilt Compensation

System includes: Touch Screen (7") with RAM mount and harness, ECU with mounting brackets, two load cells with mounting brackets and hardware, cables to suit most applications, operator's and installation manual. When ordered, optional licenses and harnesses will be pre-installed. Optional protective enclosures are available for harsh environments. This is not a legal-for-trade weighing system. One year limited warranty.
